

Cohorts: isolated primary adversity episodes

UKHLS: 24,781 people
HRS: 13,073 people

a One prior, different adversity

Earlier adversity

Completed acute /
two-year response

Later adversity
of a different type

Acute / two-year response

UKHLS: n = 1,956
HRS: n = 1,166

b Recurrent caregiving

Earlier caregiving episode

Completed acute /
two-year response

Observed no-caregiving reset

Later caregiving episode
Acute / two-year response

Acute | Two-year persistence
UKHLS: 1,990 | 1,033
HRS: 164 | 126

Registered before estimation

c Multiple prior events

At least two prior episodes

Completed acute responses
before target pre1

Mean prior acute response

Earliest eligible target event
Acute response

UKHLS: n = 1,089
HRS: n = 188

Registered before estimation

Current-state benchmark

Mental health measured immediately before the target event (pre1)
Compare prior-response information before and after adding current state

Held-out evaluation

Person-grouped cross-validation and temporal holdout
Information flow, not a causal diagram; counts refer to eligible people
