

Cross-adversity prediction: robustness checks

● CV: person-grouped cross-validation

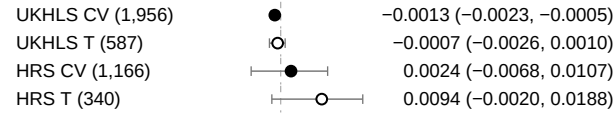

○ T: temporal holdout

a Acute response

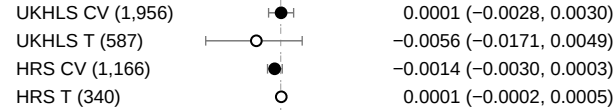

Change-score model

Cohort / validation (n) ΔR^2 (95% CI)

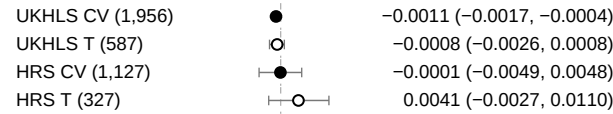

Prior response without current mental health

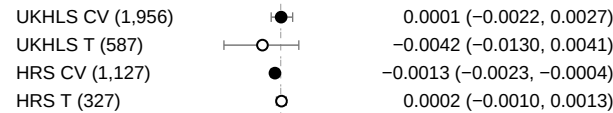

Prior response after current mental health

Split-half response without current mental health

Split-half response after current mental health

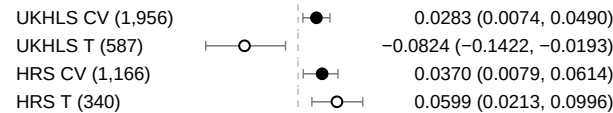

c Two-year persistence

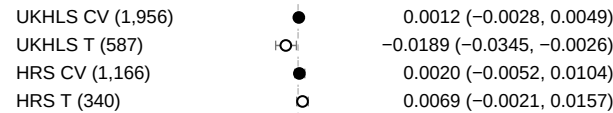

Change-score model

Cohort / validation (n) ΔR^2 (95% CI)

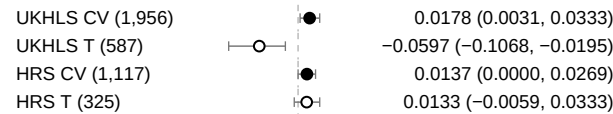

Prior response without current mental health

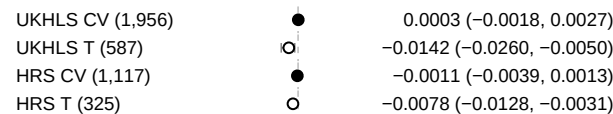

Prior response after current mental health

Split-half response without current mental health

Split-half response after current mental health

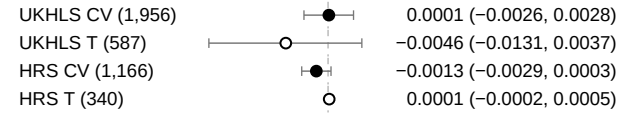

b Acute response

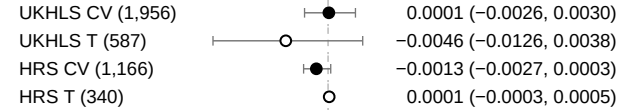

ANCOVA model

Cohort / validation (n) ΔR^2 (95% CI)

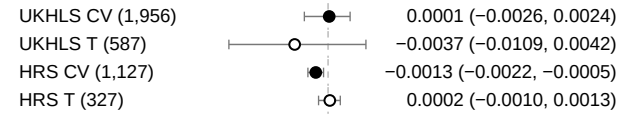

Prior response without current mental health

Prior response after current mental health

Split-half response without current mental health

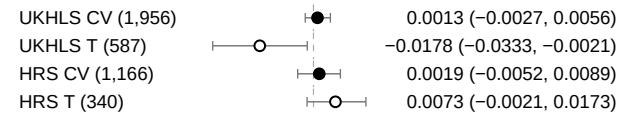

d Two-year persistence

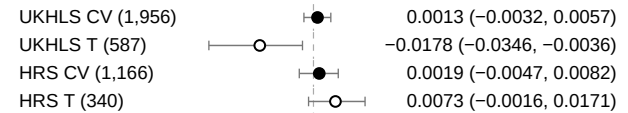

ANCOVA model

Cohort / validation (n) ΔR^2 (95% CI)

Prior response without current mental health

Prior response after current mental health

Split-half response without current mental health
