

Attrition weighting and complete-case sensitivities

Points are descriptive estimates; confidence intervals were not estimated.

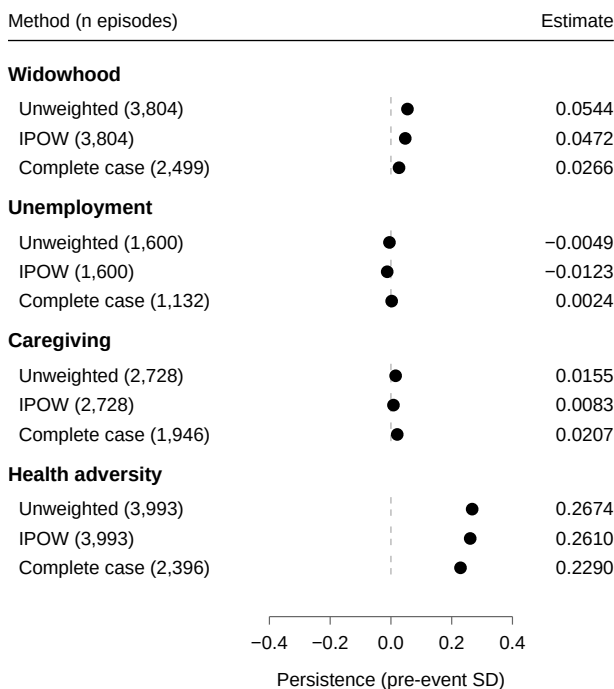

a UKHLS: two-year persistence

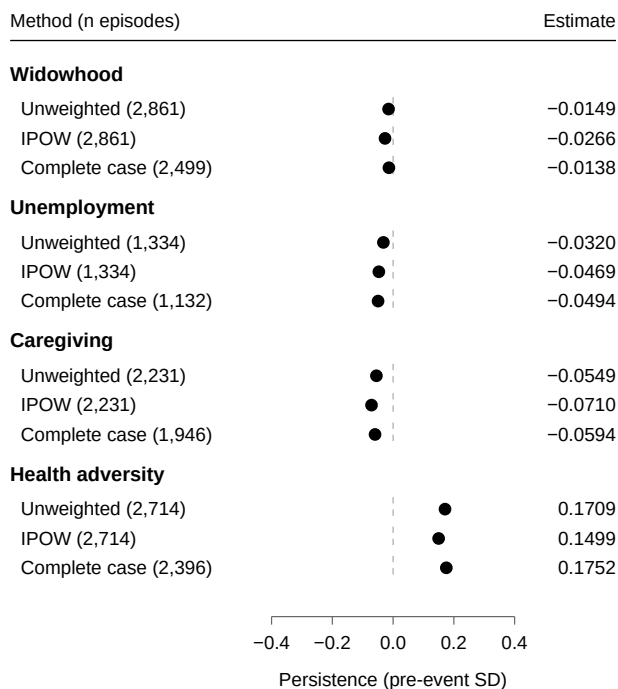

b UKHLS: four-year persistence

c HRS: two-year persistence

d HRS: four-year persistence

IPOW: inverse-probability-of-observation weighting; weights truncated at the 1st and 99th percentiles.

Complete cases have pre-event, event, two-year and four-year observations. Higher values indicate worse persistence.
